2. Citations and explanations (Rule 70.7)

The invention claimed in the present application relates to limiting the operating area around an axle of an industrial robot. It comprises a stop pad and a number of stop elements located on the part that can rotate around the axle. The stop elements comprise organs that couple the stop elements in a manner that take up the force generated between the stop pad and the stop element to be taken up as if the elements taken together made up one contiguous stop element.

Reference is made to the following documents:

D1: US 5839322 A D2: DE 3721274 A1

Documents D1 and D2 show state of the art technology relevant to claims of the present application as indicated in the International Search Report. None of the documents D1 and D2 shows the invention claimed in this application.

Consequently, the invention claimed in this application is considered to be novel, it comprises an inventive step, and has industrial applicability.
